Motivation for the Intern Ship 60%

Confidence to pass the Intern Ship 60%

Plan Plan to do today

There two things should be finished for me, the first is to rewrite the 'catalog', the second is to rethink the software design weakness and find out a solution for the following development.

Do Work you did today

First, find out the solution for solving the problems that the reviewer mentioned before, then finish a nearly entire new 'catalog'; Second, several new technical problems have been found. Take one for example, the fast implementation of prediction model is python, but the supporting language just includes java and cpp, which will consume a little more time to finish the demo.

See Success and failure of your work today

Learn a lot but not very successful. I search a lot of business related materials about supermarkets management software. By this way, I have a more clear vision of state-of-art market. I believe that there should be more techniques applied to this kind of software, so as to make it smarter and smarter. Artificial Intelligence is the key to solve this problem.

Note Other notes about your work

None.

Today Anything you felt, etc.

This task is more challenging to follow than I had expected. I should have paid a little time to prepare the 'catalog' after the first review session.
